

MAINTENANCE POLICY

Leocata's Transport and group of companies is committed to ensuring the business, employees and contractors comply with all relevant legislation and standards that relates to heavy vehicle management.

Our commitment is to ensure and to provide the required support to maintain Maintenance policies and procedures and accreditations.

We are committed to maintaining safe, reliable, and roadworthy vehicles/equipment via a planned maintenance program. Drivers will carry out pre trip inspections of nominated vehicles/equipment and report any faults via the fault reporting system.

Our maintenance staff will ensure the Maintenance Management Program adheres to the requirements of the Maintenance Management Standards as per accreditation requirements and the law.

All repairs will be carried out by persons having suitable qualifications or the experience to competently complete the repair tasks, or to do so under suitable supervision.

In the event of urgent repairs (i.e., serious or safety related faults) the closest or most suitable repairer shall be used to maintain road worthiness even if it is away from the main depot.

We will endeavour to source parts from suppliers who prioritise sustainability and low emissions with seeking continuous improvement by reviewing maintenance practices with a focus on our footprint
